

WAN Optimization - Kilpatrick Stockton

Company Profile

- AmLaw 100 full-service international law firm
- Deliver innovative solutions for results-oriented council
- 500 attorneys and nine offices across the US, Europe and the Middle East

The Challenge

The firm has been in the process of centralizing all key services to reduce costs and increase efficiencies and security in their environment. Key to their strategy is ensuring all revenue-generating applications are hosted in such a way they are protected from disruption and included in their business continuity plan. This meant migrating key services from the field offices into one of their centralized hardened data centers.

Throughout this process the attorneys and staff expected to receive the same level of performance regardless of the application's location.

The Solution

WAN Optimization: The firm worked with iVision to come up with a solution as to how they could centralize but continue to meet user's high expectations.

iVision evaluated several solutions working directly with the manufacturers on the firm's behalf. Then they conducted a real world pilot so the firm could see how each would perform on their network.

At the end of this process the right WAN optimization solution was clear.

The Value

iVision deployed a robust WAN optimization platform that allowed Kilpatrick Stockton to further centralize services such as document management and email to harden data centers.

The firm has saved over \$50K per site in CapEx costs and established a more sustainable technology foundation for the firm to grow.

About iVision

iVision is a technology management consulting and managed services company that can partner with you to establish a thought-leading, sustainable and cost-conscious IT environment for your business.

iVision optimized and accelerated network operations, improved disaster recovery and business continuity, and saved over \$400,000 in CapEx for Kilpatrick Stockton.

The iVision Solution

- Evaluation, design and deployment of the right wide area acceleration solution
- Optimized network traffic, pulling back remote services
- Enabled better disaster recovery and business continuity

Look Forward

- Improved network performance
- Decreased complexity, improving uptime
- Enable additional service and application consolidation
- Improved end user experience

Client Testimonial

"Since we optimized our WAN we were able to take advantage of the many benefits of centralization without affecting the user experience."
