

Next Generation Data Center...

Exploring game changing technologies that will shape the data center landscape for years to come and what you can do to prepare...

iVision Roundtable Series

Event Overview:

Tomorrow's data center will need to support business strategy and agility while reducing overall risk and costs in a challenging economic landscape. The next generation of data centers will arise through intelligent management and integration of a portfolio of advanced technologies and services throughout the network, server and storage layers. Please join us for a collaborative discussion as we explore the key drivers and solutions shaping the Next Generation Data Center.

Agenda:

- ✓ **The Next Generation Data Center Exploration:**
 - What does the green, sustainable and robust data center of the future look like in 2010, 2011 and beyond? *(Presented by iVision)*
